OECD Water Governance Indicator Framework

|

Description / Abstract

The OECD Water Governance Indicator Framework was developed within the OECD Water Governance Initiative through a bottom-up and multi-stakeholder approach over 2015-2017 and pilot-tested by 11 institutions at different scales and in different geographic and socio-economic contexts. It provides a voluntary multi-stakeholder self-assessment tool to understand the performance of water governance systems at city, basin, regional or national scales. Its primary objective is to stimulate a transparent, neutral, open, inclusive and forward-looking dialogue across stakeholders on what works, what does not, what should be improved and who can do what.

The report proposes two major tools for interested cities, basins, regions and countries to strengthen their water policies.

1. First, it provides the OECD Water Governance Indicator Framework, a self-assessment tool to measure, assess and take action collectively.
2. Second, it sets out 50+ concrete practices illustrating the Principles.
