# Gender Analysis – a Tool for Transforming Water Resources Management

|

## **Description / Abstract**

In a series of inter-regional discussions, GWP Senior Gender and Social Inclusion Specialist Liza Debevec is investigating what GWP as an institution can do to apply gender equality and social inclusion in its practical work. From the GWP Gender Action Piece, published in 2017, she looks at the 4 action areas that were identified as key to progress. This month, she talked to Colin Herron and Fabiola Táborá about Action Area 2 – gender and inclusion analysis that drives change. Both Herron and Táborá are involved in finalizing complementary gender analyses in their respective areas of expertise – global and regional (Central America) – and they discuss how to use the findings to transform water resources management through gender mainstreaming.
