Description / Abstract

The International Accounting Standards Board (Board) is often asked why IFRS Standards don't mention climate change. While the phrase 'climate-change' does not feature in our requirements, IFRS Standards do address issues that relate to climate-change risks and other emerging risks. The Board is also updating its non-mandatory guidance on management commentary, where it would expect companies to address material environmental and societal issues, complementing the information in financial statements.

In April 2019 the Australian Accounting Standards Board (AASB) and Auditing and Assurance Standards Board (AUASB) issued a joint bulletin, 'Climate-related and other emerging risks disclosures: assessing financial statement materiality using AASB/IASB Practice Statement 2'1 . The focus of that publication was to illustrate how qualitative external factors, such as the industry in which the company operates, and investor expectations may make such risks 'material' and warrant disclosures in the financial statements, regardless of their numerical impact.

Taking inspiration from the joint AASB-AUASB bulletin, we have prepared this publication to help analysts and investors better understand our requirements and our guidance on the application of materiality.
