Transboundary Water Management: Who does What, Where? Analysing the Data SIWI's Transboundary Water Management Database

|

Author(s)

Kim, Kyungmee Glaumann, Karin

Description / Abstract

In 2011 the Swedish Water House conducted a mapping of regional and international actors working in transboundary water management (TWM), which aimed to assist the identification of “knowledge gaps” and needs for further actions that could lead to more informed decision-making in water management. It also sought to promote objective decision-making, thereby helping to form a framework for resource allocation in TWM. Based on the mapping a database was created. The on-going activities of 94 actors, and more than 700 transboundary river and lake basins, aquifers and large marine ecosystems can be found in the database.
