# Governance of Groundwater Resources in Transboundary Aquifers (GGRETA)

|

## **Description / Abstract**

The GGRETA project is a technical assistance effort that strives to achieve a better integration of groundwater resources into the water budget of basins, countries and regions, as part of a step-by-step approach to enable and foster transboundary cooperation. GGRETA focused on the two first steps of this process towards transboundary cooperation over groundwater: establishing a shared science based understanding of the resource, and strengthening the technical capacity in the countries sharing the aquifer.
