

● RESOURCE

# Valuing Water: The 2021 World Water Development Report

|

## Description / Abstract

Water is a unique and non-substitutable resource of limited quantity. As the foundation of life, societies and economies, it carries multiple values and benefits. But unlike most other valuable resources, it has proven extremely difficult to determine its true 'value'.

The 2021 World Water Development Report on "Valuing Water" assesses the current status of, and challenges to, the valuation of water across different sectors and perspectives, and identifies ways in which valuation can be promoted as a tool to help achieve sustainability.
