Training module - How to integrate gender issues in climate-smart agriculture projects

|

Author(s)

Karttunen, Kaisa Sisto, Ilaria

Description / Abstract

The purpose of the training module is to provide learners with a better understanding of what the gender roles in CSA are and their critical impact on project outcomes and sustainability. The training will teach them about different methods and tools to identify, formulate, implement, monitor and evaluate gender-responsive actions and practices in CSA development projects. Through the training, learners will become familiar with the main concepts of gender, climate change and climate-smart agriculture. They will also understand the relevance of gender dimensions in climate change adaptation and mitigation and in developing gender-responsive CSA interventions. Furthermore, they will learn the steps to take and tools and approaches available for conducting gender analysis and promoting gender mainstreaming in CSA project design, implementation and monitoring. The manual also presents available gender, climate change and CSA guidelines and other relevant materials to support learners in their work in implementing gender-responsive interventions. This training module provides basic information for organizing a short training workshop to develop gender mainstreaming capacities in CSA-related projects, throughout the whole project cycle. The module mainly focuses on activities in the field. It is important to recognize, however, that gender-responsive CSA development also requires actions at the institutional and policy level as well as changes in the existing social and cultural norms. The module also provides some recommendations for better integration of gender issues in governments' CSA policies and strategies.
