AQUASTAT - FAO's Global Information System on Water and Agriculture, Water & Gender

|

Description / Abstract

The FAO Policy on Gender Equality states as the first Minimum Standard that "All major FAO statistical databases incorporate sex-disaggregated data where relevant and available. In the short-term, this will involve mining data from existing sources, particularly household surveys, for sex-disaggregated statistics; in the longer term, efforts will be made to collect and disseminate additional sex-disaggregated data".

AQUASTAT, as one of the main FAO statistical databases, therefore wishes to improve the availability of sex- and age- disaggregated data relative to agricultural water management at country-level.
