[Cheong, So-Min](#)

**Description / Abstract**

This paper argues for a stronger integration of marine sciences and coastal management studies that generates better formulated marine policies and viable policy implementation strategies. Integration of natural and social sciences in environmental management has surfaced as a key issue recently in the fields of sustainability science, ecosystem-based management, and social-ecological resilience. This paper promotes such trend in marine studies, and examines the rationale, progress, and examples of the integration.
